

For Immediate Release

Hubbell Building Automation, Inc. announces new LX Series 8-Relay Lighting Control Panel

July 2006 - Austin, TX - Hubbell Building Automation, an industry leader in the development of cutting edge networked lighting control technologies, announced today the introduction of the new LX Series 8-Relay Lighting Control Panel.

The new LX Lighting Control Panel is LonMark® 3.3 certified and can be integrated seamlessly in open system, multi-vendor, interoperable LonWorks® networks.

The LX Series 8-Relay Panel provides support for 1 to 8 relay configurations and features UL Listed robust and reliable 20 Amp mechanically latching relays. Based on the same system platform as the other LX Series panels, the LX8 uses a unique handheld touch screen tablet with Graphical User Interface for easy local and remote management of your lighting control system. The system's rich scheduling functions enable you to create schedules easily for your business needs. Schedules can also be updated automatically, if you desire, using the configurable Daylight Savings Time adjustment support. The panel also provides support for sunrise and sunset times based on date and geographical position.

If it were any easier, it would program itself. The LX Series - Innovative, Integrated, Simple.

About Hubbell Building Automation
