

**For Immediate Release**

**Hubbell Building Automation, Inc. announces LX Series Web-based Management and System Integration Solution**

December 2006 – Austin, TX – Hubbell Building Automation, an industry leader in the development of cutting edge networked lighting control technologies, announced today the introduction of a new networked lighting control solution – the LX JENEsys™.

The LX JENEsys represents an evolution in the interface and integrations of lighting control systems. Utilizing a PC to interface to a lighting control system is a great idea; installing software on every PC that wants or needs to interface with the system is a bad idea. The LX JENEsys solves this problem by allowing any PC with an Internet Explorer™ compatible browser to interface with the LX JENEsys lighting control system through a built-in Web Server. Utilizing the latest in Graphical User Interface Design techniques, the LX JENEsys provides a easy to use highly intuitive Graphical User Interface that provides all of the same programming features possible via the LX Touch Tablet and more. System users can easily program, monitor or control locally or remotely all of the functions of the LX Lighting Control System conveniently from their PC – all without installing software.

The LX JENEsys is powered by the NiagaraAX Framework®, the industry’s first software technology designed to integrate diverse systems and devices. With this technology, the LX JENEsys provides protocol normalization between a wide range of BAS protocols including LonWorks™, BACnet™ and Modbus™. With a simple click of the mouse, the LX JENEsys automatically builds the selected system integration complete with documentation of all generated network variables and control points. Integration need not be difficult it simply needs to be.

**About Hubbell Building Automation**

Hubbell Building Automation, Inc., headquartered in Austin, TX is a subsidiary of Hubbell Incorporated (A Delaware Corporation). Hubbell Building Automation draws on over 30 years of lighting control experience. As the leading developer of groundbreaking technologies in lighting control panels, HID and Fluorescent controls as well as occupancy sensor controls, Hubbell Building Automation manufactures a complete suite of innovative, integrated and simple lighting control solutions.
